

BioFlex LILT Patient Testimonials: Temporomandibular Joint (TMJ)

Temporomandibular joint (TMJ) connects upper and lower jaw together. It can become inflamed or misaligned causing a great deal of pain.

"...even my co-workers could notice that I was feeling better."

"When I first came to Laser Solutions I was in a lot of jaw pain from a dental procedure from 10 months earlier. The pain made it hard to smile, open my jaw wide and I was unable to eat anything hard, crunchy or chewy. My co-workers could see how much it was affecting me and wanted to see me back to the way I was. After trying physiotherapy, rest and numerous suggestions from my dentist and physiotherapist I was desperate to find something to relieve the pain and discomfort. When I learned about laser therapy I figured I didn't have anything to lose in checking it out.

From the consultation and first treatment I was made to feel at ease and welcomed at the office. The therapists showed me how to help elevate some of the pain at home through massaging the trigger points and the muscles. After the first few treatments I could notice a difference in the swelling, and pain. Near the end of the treatments even my co-workers could notice that I was feeling better. It didn't hurt to smile, I could open my jaw wider, and once again able to eat most of the things I was unable to for months.

I can't believe that it took me so long to find the solution to help alleviate the pain and discomfort. I would highly recommend anyone who has tried everything else for relief try laser therapy. If it worked for me it can work for you. I can't thank Blain and his staff enough for all of their help and work. I will definitely keep Laser Therapy in mind the next time I am injured and in pain."

Kerri
Calgary, AB

"I woke one morning to find that I couldn't open my mouth. X-rays showed nothing, so Dr. YY suggested laser treatments. She convinced me after talking about a patient who had recovered 80% of her mandible (lower jaw) mobility after laser treatments. Ten treatments later, I am functioning normally again. I am able to eat a sandwich or enjoy a hamburger without pain. Laser was, without a doubt, the best solution!
